CONTENTS

Volume 54, Issue Nos. 1–12 (2007)

International Journal for
NUMERICAL METHODS IN FLUIDS

*Issue No.* 1, 10 May

Using vorticity to define conditions at multiple open boundaries for simulating flow in a simplified vortex settling basin: A. N. Ziaei, J. M. McDonough, H. Emdad and A. R. Keshavarzi . . . . . 1

An enhanced polygonal finite-volume method for unstructured hybrid meshes: H. T. Ahn and G. F. Carey . . . . . 29

Euler solutions using flux-based wave decomposition: N. Ahmad and J. Lindeman . . . 47

Direct 2D simulation of small gas bubble clusters: From the expansion step to the equilibrium state: J. Bruchon, A. Fortin, M. Bousmina and K. Benmoussa . . . . . 73

A new method for direct simulations of flexible filament suspensions in non-zero Reynolds number flows: D. Qi . . . . . 103

*Issue No.* 2, 20 May

On the construction of manufactured solutions for one and two-equation eddy-viscosity models: L. Eça, M. Hoekstra, A. Hay and D. Pelletier . . . . . 119

On the orbital motion of a rotating inner cylinder in annular flow: S. Feng, Q. Li and S. Fu . . . . . 155

Numerical study of transitional separated–reattached flow over surface-mounted obstacles using large-eddy simulation: I. E. Abdalla, M. J. Cook and Z. Yang . . . . . 175

A relaxation multiresolution scheme for accelerating realistic two-phase flows calculations in pipelines: N. Andrianov, F. Coquel, M. Postel and Q. H. Tran . . . . . 207

*Issue No.* 3, 30 May

Baroclinic stability for a family of two-level, semi-implicit numerical methods for the 3D shallow water equations: F. J. Rueda, E. Sanmiguel-Rojas and B. R. Hodges . . . . . 237

Three-dimensional instability of axisymmetric flows: Solution of benchmark problems by a low-order finite volume method: A. Y. Gelfgat . . . . . 269

Aerosols dispersion modelling using probabilistic particle tracking: A. Smirnov, S. Rowan and J. McCormick . . . . . 295

Numerical study of hysteresis in annular swirling jets with a stepped-conical nozzle: M. Vanierschot and E. Van den Bulck . . . . . 313

Numerical simulation of thin airfoil stall by using a modified DES approach: D. Li . . . . 325

Computation of 2D Navier–Stokes equations with moving interfaces by using GMRES: J. Wang . . . . . 333

ERRATUM . . . . . 353

*Issue No.* 4, 10 June

Two preconditioners for saddle point problems in fluid flows: A. C. de Niet and F. W. Wubs ..... 355

A control volume finite-element method for numerical simulating incompressible fluid flows without pressure correction: A. Omri, I. Hajri and S. B. Nasrallah ..... 379

Numerical study of wave propagation in compressible two-phase flow: D. Zeidan, E. Romenski, A. Slaouti and E. F. Toro ..... 393

Simulation of ship breaking bow waves and induced vortices and scars: R. V. Wilson, P. M. Carrica and F. Stern ..... 419

Semi-Lagrangian semi-implicit time-splitting scheme for the shallow water equations: A. Bourchtein and L. Bourchtein ..... 453

*Issue No.* 5, 20 June

A versatile incompressible Navier–Stokes solver for blood flow application: M. Garbey and F. Pacull ..... 473

Stability and approximability of the $\mathscr{P}_1$–$\mathscr{P}_0$ element for Stokes equations: J. Qin and S. Zhang ..... 497

Large eddy simulation of turbulent flow in a true 3D Francis hydro turbine passage with dynamical fluid–structure interaction: L. Zhang, Y. Guo and W. Wang ..... 517

The influence of source terms on stability, accuracy and conservation in two-dimensional shallow flow simulation using triangular finite volumes: J. Murillo, P. García-Navarro, J. Burguete and P. Brufau ..... 543

*Issue No.* 6–8, 30 June–20 July

**Special Issue:**
**Stabilized, Multiscale and Multiphysics Methods**

Preface: T. E. Tezduyar and A. Masud ..... 591

**Fundamental and Enabling Technologies**

*YZβ* discontinuity capturing for advection-dominated processes with application to arterial drug delivery: Y. Bazilevs, V. M. Calo, T. E. Tezduyar and T. J. R. Hughes ..... 593

Computation of turbulent flows using a finite calculus–finite element formulation: E. Oñate, A. Valls and J. García ..... 609

The violation of objectivity in Laplace formulations of the Navier–Stokes equations: A. Limache, S. Idelsohn, R. Rossi and E. Oñate ..... 639

A stabilized mixed finite element method for Darcy–Stokes flow: A. Masud ..... 665

The adjoint weighted equation for steady advection in a compressible fluid: A. A. Oberai, P. E. Barbone and I. Harari ..... 683

Computation of inviscid compressible flows with the V-SGS stabilization and *YZβ* shock-capturing: F. Rispoli, R. Saavedra, A. Corsini and T. E. Tezduyar ..... 695

Dynamic subscales in the finite element approximation of thermally coupled incompressible flows: R. Codina and J. Principe ..... 707

Semidiscrete formulations for transient transport at small time steps: I. Harari and G. Hauke ..... 731

Vorticity–strain residual-based turbulence modelling of the Taylor–Green vortex: R. E. Bensow, M. G. Larson and P. Vesterlund ..... 745

Galilean invariance and stabilized methods for compressible flows: G. Scovazzi ..... 757

A 'divide-and-conquer' spatial and temporal multiscale method for transient convection–diffusion–reaction equations: V. Gravemeier and W. A. Wall ..... 779

**Moving Boundaries and Interfaces: Fluid–Structure Interactions, Free-Surface Flows and Fluid–Fluid Interfaces**

An adaptive control system using the fuzzy theory for transient multi-physics numerical simulations: T. Muramatsu and G. Yagawa ..... 805

A meso-scale analysis of lipid bilayers with the dissipative particle dynamics method: Thermally fluctuating interfaces: T. Sugii, S. Takagi and Y. Matsumoto ..... 831

Computation of fluid–solid and fluid–fluid interfaces with the CIP method based on adaptive Soroban grids—An overview: T. Yabe, K. Takizawa, T. E. Tezduyar and H.-N. Im ..... 841

Modelling of fluid–structure interactions with the space–time finite elements: Solution techniques: T. E. Tezduyar and S. Sathe ..... 855

Modelling of fluid–structure interactions with the space–time finite elements: Arterial fluid mechanics: T. E. Tezduyar, S. Sathe, T. Cragin, B. Nanna, B. S. Conklin, J. Pausewang and M. Schwaab ..... 901

A 3D adaptive mesh moving scheme: H. Kanchi and A. Masud ..... 923

A framework for stabilized partitioned analysis of thin membrane–wind interaction: R. Wüchner, A. Kupzok and K.-U. Bletzinger ..... 945

Stabilized edge-based finite element simulation of free-surface flows: R. N. Elias and A. L. G. A. Coutinho ..... 965

Numerical investigation of the effect of hypertensive blood pressure on cerebral aneurysm—Dependence of the effect on the aneurysm shape: R. Torii, M. Oshima, T. Kobayashi, K. Takagi and T. E. Tezduyar ..... 995

Ship hydrodynamics computations with the CIP method based on adaptive Soroban grids: K. Takizawa, K. Tanizawa, T. Yabe and T. E. Tezduyar ..... 1011

A numerical model based on the mixed interface-tracking/interface-capturing technique (MITICT) for flows with fluid–solid and fluid–fluid interfaces: M. A. Cruchaga, D. J. Celentano and T. E. Tezduyar ..... 1021

**Erratum**

ERRATUM ..... 1031

*Issue No.* 9, 30 July

The development of a Cartesian cut cell method for incompressible viscous flows: F. Gao, D. M. Ingram, D. M. Causon and C. G. Mingham ..... 1033

An implicit two-dimensional non-hydrostatic model for free-surface flows: A. Ahmadi, P. Badiei and M. M. Namin ..... 1055

A proposed modification to the dynamic approach: S. Bhushan ..... 1075

Stability of fluid–structure thermal simulations on moving grids: B. Roe, A. Haselbacher and P. H. Geubelle ..... 1097

Modelling of the free surface with heat and mass transfer considerations on a liquid filling a porous slab heated from its sides: S. M. Prabhu and T. Soundarajankrishnan ..... 1119

Efficient retrieval of the thermo-acoustic flame transfer function from a linearized CFD simulation of a turbulent flame: J. F. van Kampen, J. B. W. Kok and Th. H. van der Meer ..... 1131

*Issue No.* 10, 10 August

A finite element model for free surface flows on fixed meshes: A. H. Coppola-Owen and R. Codina ..... 1151

Effect of vertical grid variability on a free surface flow model: S. F. Bradford ..... 1173

Fingering patterns on an expanding miscible drop in a rotating Hele-Shaw cell: C.-H. Chen and C.-Y. Chen ..... 1201

Particle transport method for convection problems with reaction and diffusion: O. Shipilova, H. Haario and A. Smolianski ..... 1215

Resolution of the Navier–Stokes equations on block-structured meshes: C. Romé, S. Glockner and J. P. Caltagirone ..... 1239

*Issue No.* 11, 20 August

Application of second-order adjoint technique for conduit flow problem: T. Kurahashi and M. Kawahara ..... 1269

Orthogonality of modal bases in *hp* finite element models: V. Prabhakar and J. N. Reddy ..... 1291

On a boundary condition for pressure-driven laminar flow of incompressible fluids: W. L. Barth and G. F. Carey ..... 1313

Two-dimensional adaptive mesh generation: Y. Zhang, Y. Jia and S. S. Y. Wang ..... 1327

Explicit formulations for evaluation of velocity gradients using boundary-domain integral equations in 2D and 3D viscous flows: X.-W. Gao ..... 1351

A stress-based least-squares finite-element model for incompressible Navier–Stokes equations: V. Prabhakar and J. N. Reddy ..... 1369

*Issue No.* 12, 30 August

A simplified $v^2$–$f$ model for near-wall turbulence: M. M. Rahman and T. Siikonen ..... 1387

Volumetric methods for evaluating energy loss and heat transfer in cavity flows: S. Norris and G. Mallinson ..... 1407

A numerical method for one-dimensional compressible multiphase flows on moving meshes: R. Saurel, J. Massoni and F. Renaud ..... 1425

A stabilized finite element method for shape optimization in low Reynolds number flows: D. N. Srinath and S. Mittal ..... 1451

Energy relaxation method for chemical non-equilibrium flow computations: M. M. Patil, J. C. Mandal and S. Swaminathan ..... 1473

Table of Contents, Volume 54 ..... iii
